

Researching the Revolution: Prospects & Possibilities
for the *Journal of Information Systems*

In the Spring, 2002 issue of JIS

Sincere thanks to Vairam Arunachalam, Andy Bailey, Jim Hunton, Joan Luft, Uday Murthy, Bob Ramsay, and Chris Wolfe for helpful suggestions on an earlier draft of this essay.

Abstract

A summary of the recent published research suggests that the “top” academic accounting journals ignore systems and technology research topics. Fortuitously, the core focus of the *Journal of Information Systems* is exactly the set of accounting-related systems and technology issues (e.g., system controls, financial implications of technology) that are under-explored in both the MIS and accounting research literatures. Accounting systems and technology research, and the *Journal of Information Systems*, have an optimistic future. Developing accounting systems and technology research demands that researchers both value and promote excellence while simultaneously encouraging diversity.
