

3. AIS Dissertation Abstracts

Since 1997, the AAA-IS Section has distributed AIS dissertation abstracts, currently through its website. Elaine Mauldin (mauldin@missouri.edu) has agreed to coordinate compiling and editing AIS dissertation abstracts completed in 2003 and 2004.

If you or someone you know has an AIS dissertation completed since January 1, 2003, please contact Elaine with the person's name and current academic affiliation (an email address would be welcomed). AIS dissertations include topics such as the organization and management of AIS, database systems, expert systems, ERP systems, computer auditing and assurance, behavioral implications of AIS, E-commerce, the effect of system tools on decision-making, and many others. Contact Elaine with dissertations completed at your school, completed by a new faculty member who recently joined your school, or completed by yourself.

For sample abstracts, and view dissertation abstracts from last year, go to:
<http://aaa-is.byu.edu/Publications/Dissertationabstracts/2004abstracts.htm>

Thank you for your time and consideration.

AIS Research Database (1986-2004) and AIS Research Database 2:

As you might recall from our Fall 2004 Newsletter, Prof. Paul Hutchison from the University of North Texas made available a downloadable database that contains accounting information systems (AIS) articles from 1986 to 2004. Obviously, this information has been very helpful – the database has been downloaded 158 times! Recently, with the assistance of Jim Hunton, Paul has updated the database and converted it to a relational form. The revised version of the database is "AIS Research Database 2" and Paul intends to add additional AIS journals in the future.

THANK YOU, PAUL!
